

Home Assignment: Mini-Game Demo

We'd love to see how you approach building a small casual game, with a strong focus on **game feel, juice, and visual polish**.

The goal isn't to build a large or complex game. Keep the core mechanic simple and focus your time on making it feel great to play - responsive interactions, satisfying feedback, animations, particles, effects, transitions, sound, and all the small details that bring a game to life.

Game Selection

Choose one of the genres below, or feel free to come up with a casual game concept of a similar scope:

- **Suggested Genres:** Match-3, Snake, Memory Game, Bubble Shooter, Hidden Object, Block Puzzle.
- **Your Own Concept:** Have another idea? Go for it! Just keep the scope manageable so you can focus on game feel and polish.

Deliverables

1. Source Code & Project Files

Share a link to a Git repository (GitHub/GitLab) or send us the complete project files.

2. Playable Build

Provide a playable web build that we can easily run and try.

3. A Few Technical Notes

Nothing too formal - just give us a little context around:

- **Stack & Assets:** Engine/tools used, third-party plugins, and sources for visual and audio assets.
- **AI Usage:** Feel free to use AI tools as part of your development process — we're completely fine with that. We'd just like to know where you used them and, in particular, which parts of the code were written or significantly assisted by AI. The same applies to AI-generated art, audio, or other assets.
- **Next Steps:** If you had more time, what would you improve or add to make the experience even more polished?

What We'll Be Looking At

- **Game Feel & Juice:** This is the main focus. We want to see responsive interactions and satisfying player feedback through timing, motion, animation, particles, effects, sound, and other details that make the game feel great.
- **Technical Art:** How effectively you combine code and visual elements to create a polished, cohesive experience.
- **Gameplay:** A simple, clear core mechanic that is intuitive and enjoyable to play.
- **Code Quality:** Clear, readable, and well-structured code.
- **Overall Polish:** How all the elements come together to make a simple game feel alive and satisfying.
